Investment Strategy

The objective of this portfolio is to provide investors with long term capital growth. The portfolio aims to generate a return of CPI+5% p.a. over any rolling 7-year period. This portfolio maintains a high risk profile and is limited to a maximum of 75% exposure to equities, which is comparable with the High Equity sector. The portfolio adheres to the guidelines set by Regulation 28.

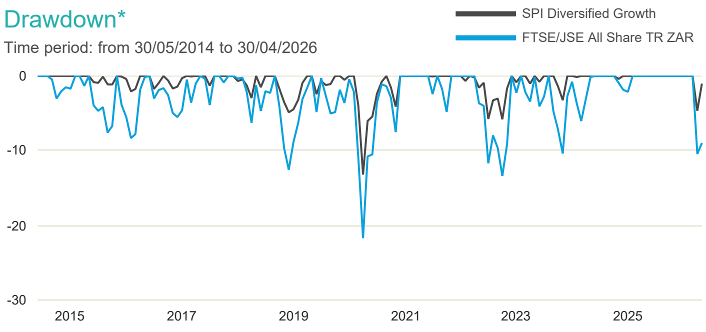
Drawdown*

Time period: from 30/05/2014 to 30/04/2026



*Returns are net of Underlying Total Investment Charges (TIC) and for periods greater than one year the returns have been annualised. Returns prior to launch of the portfolio are simulated based on the returns of the underlying funds at their launch weightings. Where applicable, post launch returns are based on a lump sum investment with income distributions reinvested, or simulated based on the latest static weightings of the portfolio, on a selected Platform.
**Underlying TIC is calculated using the sum of the latest available Total Expense Ratio (TER) and Transaction Cost (TC) of each of the underlying funds and their static weightings at month end on a selected Platform. Underlying TIC varies daily as the actual weightings of the underlying funds fluctuate and is not an explicit cost to the investor. It includes VAT but exclude Investment Manager, Financial Advisor, Consulting and Platform fees. TIC is defined as the sum of the TER and TC. Total Expense Ratio (TER) represents the percentage of the value of each underlying fund which was incurred as expenses relating to the administration of that fund over a rolling 3 year period and annualised. Transaction Cost (TC) represents the percentage of the value of each underlying fund which was incurred as costs relating to the buying and selling of the assets in that fund over a rolling 3 year period and annualised.
